About SmartSight Analytics

IT services, ERP, software and analytics for growing businesses.

We design and build websites, web and mobile apps, ERP systems, custom software and dashboards around how your business actually works. The products in this portfolio are our starting points, each one adapted to the client process, roles and data. Complete suites such as BuildX ERP and MediCore HMS are modular: the plan follows the modules a company opts for.

What we build

- Web and mobile applications
- ERP and customized ERP modules
- Custom business software and automation
- Analytics dashboards and reporting

How we work

1. Discovery call and free project audit
2. Solution blueprint: screens, modules, roles
3. Design and development
4. Testing, training and launch
5. Monthly support and improvements

In this portfolio

BuildX ERP (with modules & plans)	Construction	3–4
MediCore HMS (with modules & plans)	Healthcare	5–6
Org Operations Suite	Operations	7
Production Reconciliation	Operations	8
Store Reconciliation	Retail & Stores	9
Accounts & Billing	Finance & Accounts	10
Shepherduite	Community & Faith	11
School Management System	Education	12
Fleet & Trip Management	Logistics & Fleet	13
Property & Lead Management	Real Estate	14
Restaurant POS & Inventory	Hospitality & Food	15
Analytics dashboards	Analytics	16

All screens in this document use illustrative sample data. Live demos are available on request.

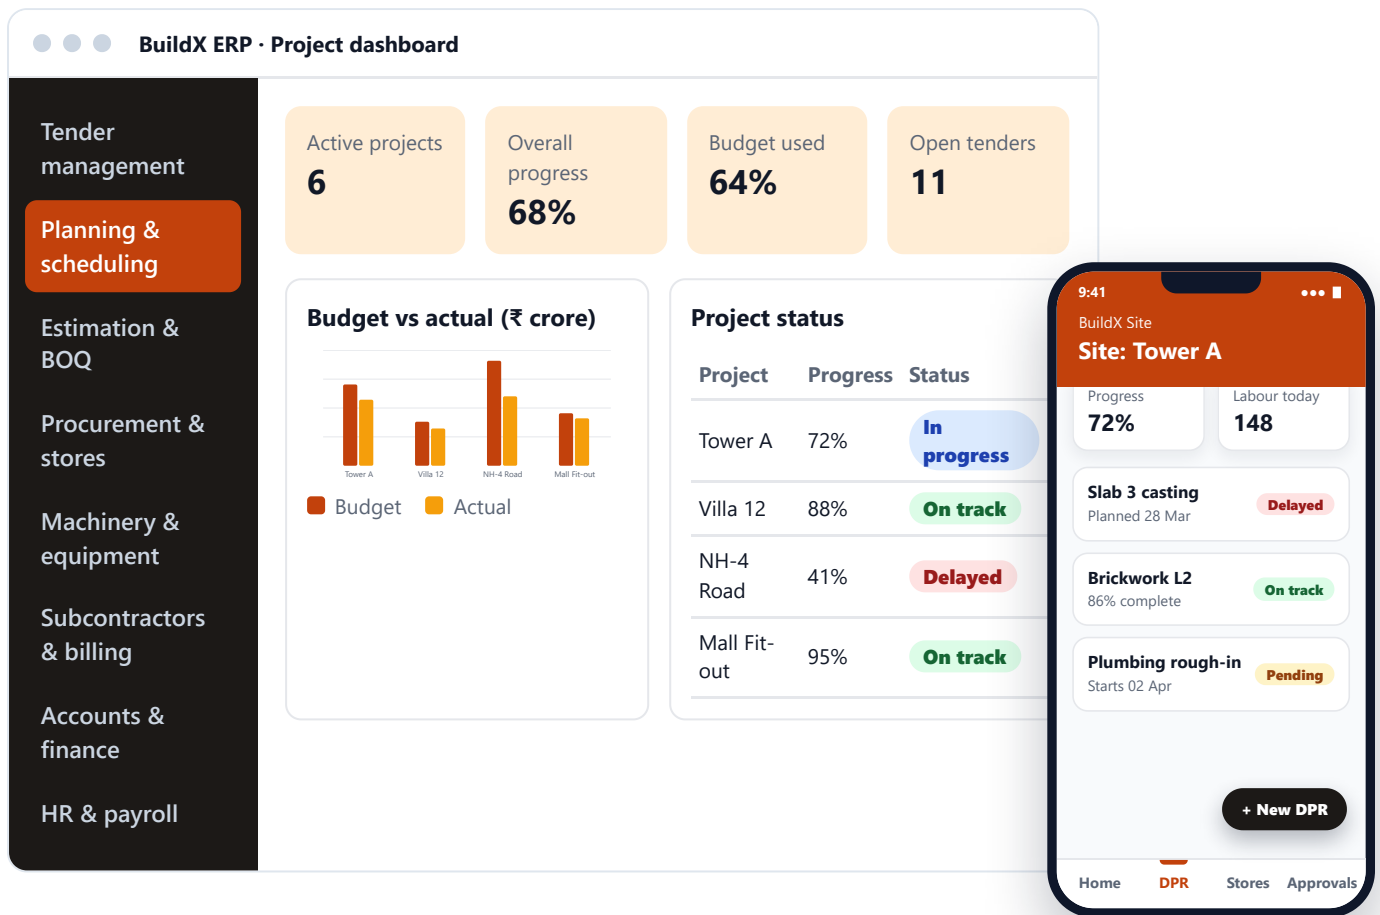

Construction

In development

Web + Mobile

BuildX ERP

A complete, SAP-class ERP for construction and infrastructure companies.

Illustrative web and mobile screens with sample data.

The problem

Tenders, project plans, site stores, machinery and accounts run in separate tools, so management sees the real project cost only after the damage is done.

How we solve it

One integrated ERP on a single connected database, from tender to final bill. Every module talks to the others, and you switch on only the modules your company needs.

1. Tender

2. Estimate & BOQ

3. Plan & schedule

4. Procure & store

5. Execute & measure

6. Bill & collect

Headline modules

Tender management

Planning & scheduling

Estimation & BOQ

Procurement & stores

Machinery & equipment

Subcontractors & billing

Accounts & finance

HR & payroll

User roles

Tender manager · Project manager · Planning engineer · Site engineer · Store keeper · Accounts · Management

Key reports

Tender win / loss · Budget vs actual · Plan vs progress · Machinery utilization · Project cash flow

Best fit: Contractors, builders, EPC and infrastructure companies of any size

BuildX ERP: modules & plans

BuildX is modular. Every company picks the modules it needs, and the plan follows those choices, along with the number of users and sites.

Core platform Always included

Users, roles & permissions

Who can see and do what

Approvals & workflow

Multi-level approval chains

Reports & MIS dashboards

Live management reports

Mobile site app

DPR, requests and approvals on site

Pre-construction

Tender management

Pipeline, bid prep, EMD / BG, win-loss

Estimation & BOQ

Rate analysis, BOQ and cost estimates

Contracts & client management

Work orders, variations, agreements

Planning & control

Planning & scheduling

WBS, Gantt, milestones, resources

Budget & cost control

Budget vs actual per project

Site progress & DPR

Daily reports and measurements

Supply chain

Procurement

Indent, quotes, PO, GRN, vendors

Stores & inventory

Multi-site stock, issues, transfers

Subcontractor management

Work orders, RA bills, retention

Resources

Machinery & equipment

Fleet, usage, fuel, maintenance

Labour & workforce

Attendance, contractors, wages

HR & payroll

Employees, leave, salary, statutory

Finance

Client billing

RA bills, escalation, certification

Accounts & finance

GL, payables, receivables, banking

Statutory compliance

GST, TDS, PF / ESI support

Quality & safety

QA / QC

Inspections, checklists, NCRs

Safety & HSE

Incidents, audits, toolbox talks

Document management

Drawings, revisions, transmittals

Suggested starting points

Small contractor

5 modules

Mid-size company

12 modules

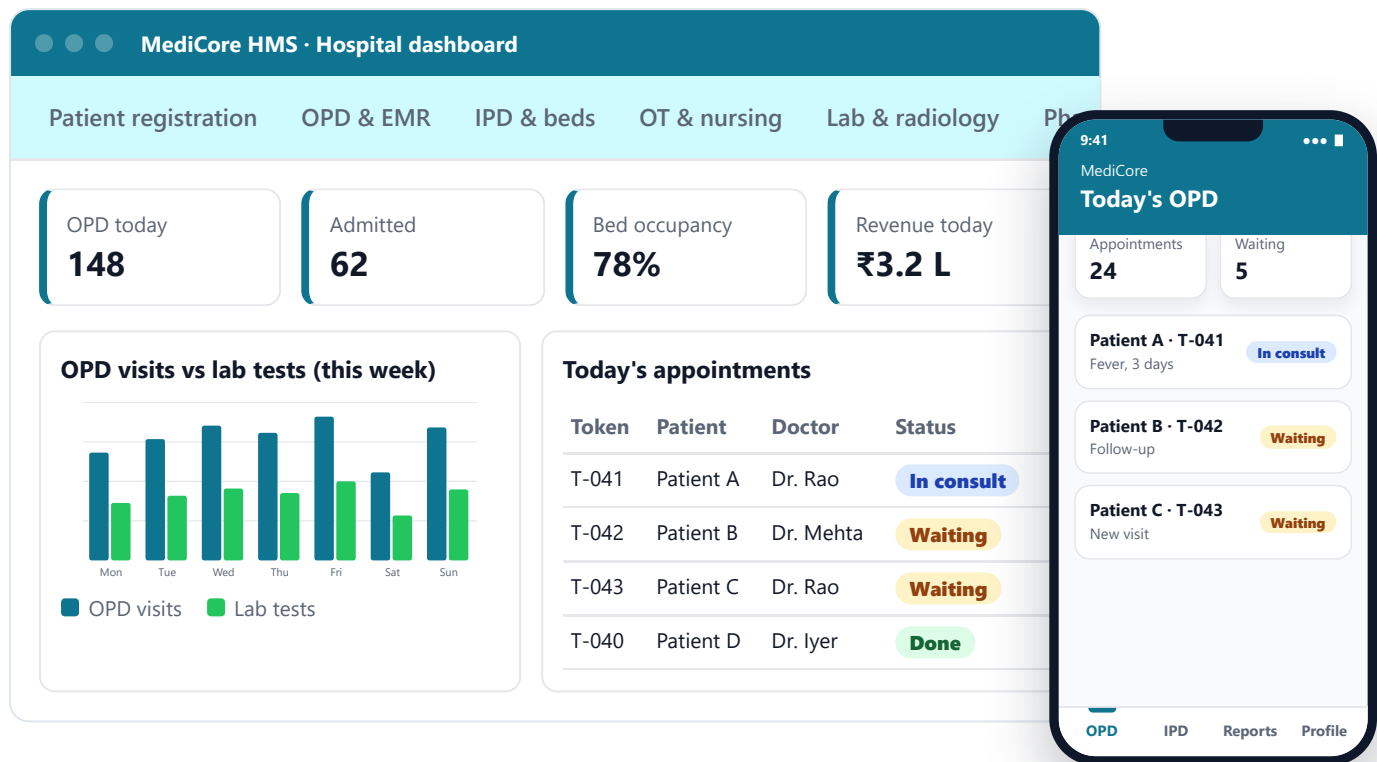

Large / EPC

All 18 modules

Plans are built from the modules you choose, plus the number of users and sites. Contact us for a quote and a live demo.

MediCore HMS

A complete hospital management system for small, mid-size and large hospitals.

Illustrative web and mobile screens with sample data.

The problem

Registration, doctor notes, labs, pharmacy and billing run on separate systems and registers, so patients wait longer, charges get missed and management has no live picture.

How we solve it

One integrated HMS that follows the patient from registration to discharge. Start with a clinic set-up and add IPD, OT, lab, radiology, insurance and multi-branch as the hospital grows.

1. Register 2. Consult 3. Investigate 4. Treat / admit 5. Bill 6. Discharge

Headline modules

Patient registration

OPD & EMR

IPD & beds

OT & nursing

Lab & radiology

Pharmacy & stores

Billing & insurance

Reports & MIS

User roles

Receptionist · Doctor · Nurse · Pharmacist · Lab technician · Billing · Administrator

Key reports

Daily collection · Doctor-wise revenue · Bed occupancy · Pharmacy stock & expiry · Insurance claim status

Best fit: Small clinics, mid-size nursing homes and large multi-branch hospitals

MediCore HMS: modules & plans

MediCore scales with the hospital. Start with a clinic set-up and add modules, beds, doctors and branches as you grow. The plan follows the modules you opt for.

Core platform Always included

Users, roles & audit log

Role-based access and a full audit trail

Reports & MIS dashboards

Live management reports

Doctor & patient mobile apps

Appointments, reports and bills on mobile

Front office

Patient registration (UHID)

Unique patient ID and demographics

Appointments & tokens

Booking, queue and display boards

Clinical

OPD & EMR

Consultations, prescriptions, records

IPD & bed management

Admission, wards, transfers, discharge

Nursing station

Vitals, medication rounds, notes

OT management

Theatre scheduling and surgery notes

Emergency & casualty

Triage and rapid registration

Telemedicine

Video consults and e-prescriptions

Diagnostics

Laboratory (LIS)

Orders, samples, results, reports

Radiology

Imaging orders and reports

Blood bank

Donors, stock and issue

Pharmacy & stores

Pharmacy

Dispensing, batches, expiry alerts

Inventory & purchase

Hospital stores and vendor orders

Billing & finance

Billing

OPD / IPD billing, packages, deposits

Insurance & TPA claims

Pre-auth, claims and settlements

Accounts

Ledgers, payables, receivables

Doctor payouts

Fee share and commission

Administration

Staff, rosters & HR

Duty rosters and attendance

Payroll

Salary and statutory deductions

Multi-branch management

Many sites on one system

Suggested starting points

Clinic / small hospital

6 modules

Nursing home / mid-size

13 modules

Large / multi-branch

All 20 modules

Plans are built from the modules you choose, plus the number of users and sites. Contact us for a quote and a live demo.

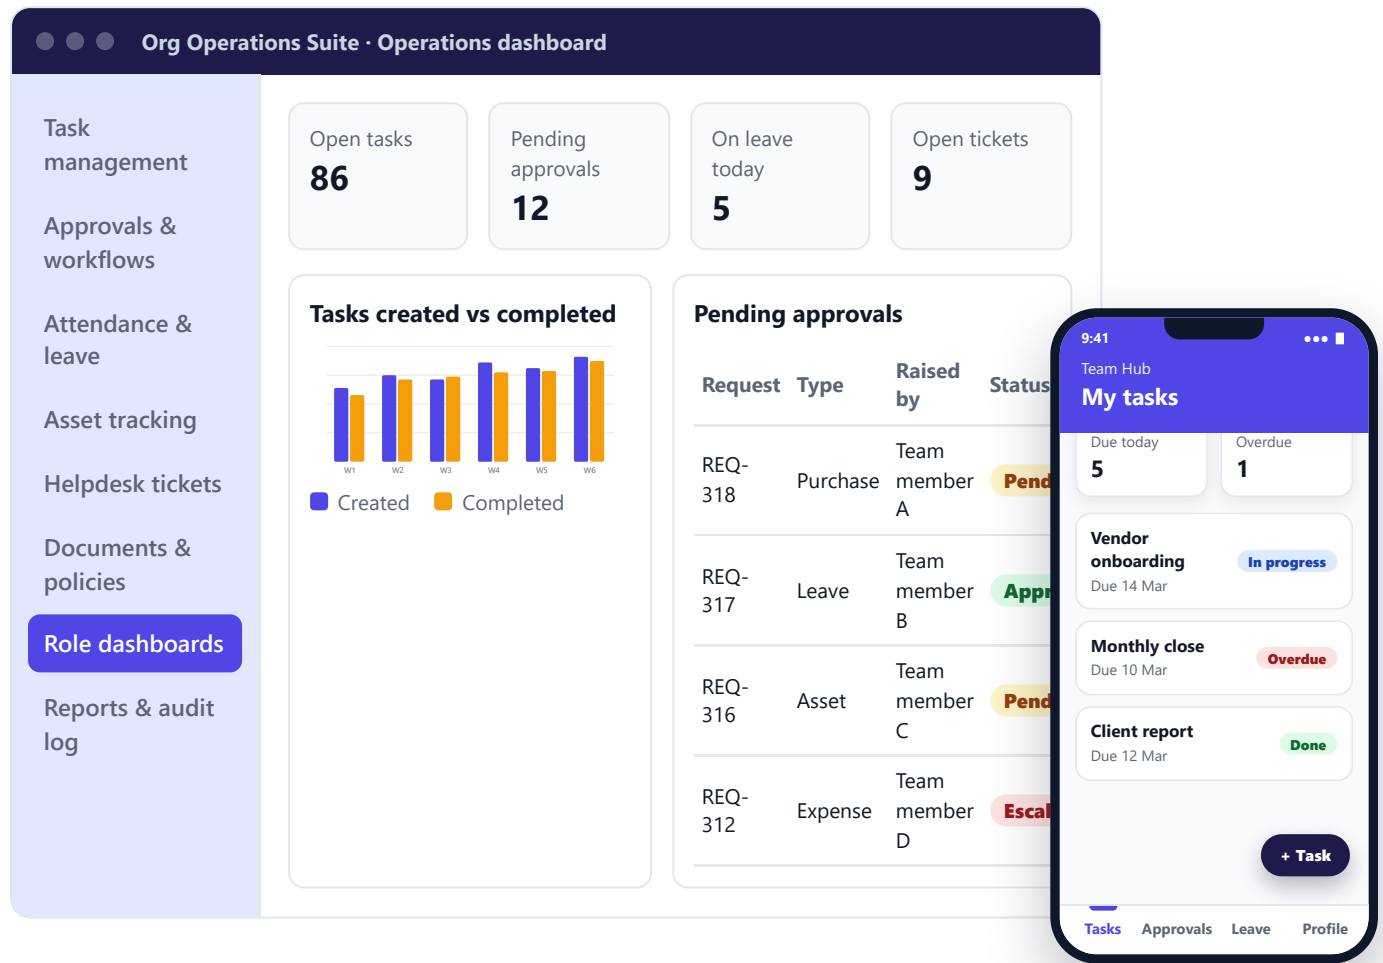

Operations

Production-ready

Web + Mobile

Org Operations Suite

Tasks, approvals, attendance and assets in one workspace.

Illustrative web and mobile screens with sample data.

The problem

Tasks, approvals, leave and asset requests move through chats and spreadsheets, so work stalls and nobody can see what is pending or who owns it.

How we solve it

One workspace for tasks, approvals, attendance, assets and tickets, with role-based dashboards that show what is pending, who owns it and how long it has waited.

1. Request

2. Review

3. Approve

4. Execute

5. Close

Core modules

Task management

Approvals & workflows

Attendance & leave

Asset tracking

Helpdesk tickets

Documents & policies

Role dashboards

Reports & audit log

User roles

Employee · Team lead · Manager · HR · Admin

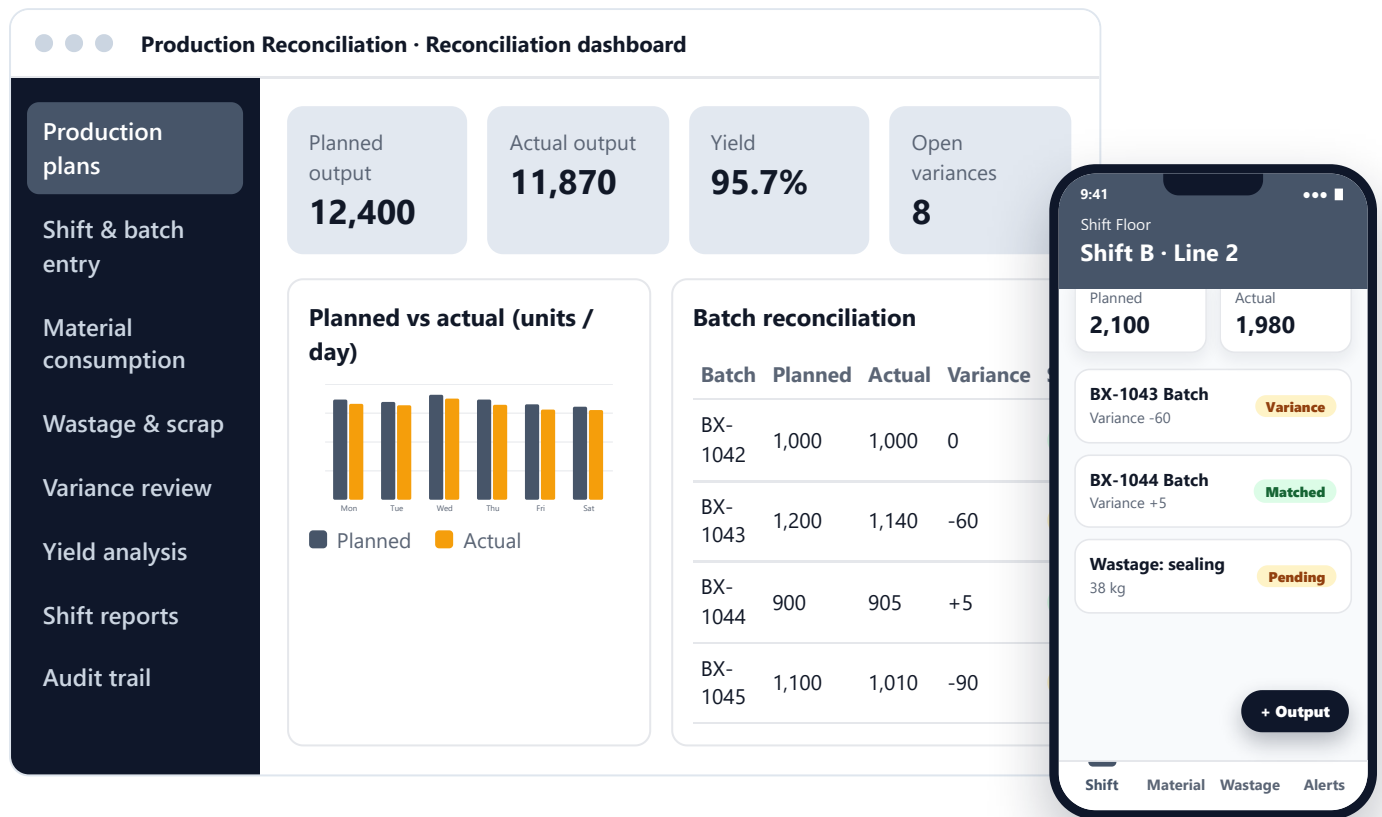

Key reports

Pending approvals ageing · Attendance summary · Asset allocation · Ticket turnaround

Best fit: Growing companies, agencies and multi-branch teams

Production Reconciliation

Match planned production with what was actually made.

Illustrative web and mobile screens with sample data.

The problem

Output, material issued and wastage are recorded separately, so gaps between plan and reality show up only at month-end, if at all.

How we solve it

A reconciliation system that compares planned and actual output and material use for every shift and batch, flags variances automatically and routes them for review.

1. Plan 2. Issue material 3. Record output 4. Reconcile 5. Review variance 6. Close batch

Core modules

Production plans

Shift & batch entry

Material consumption

Wastage & scrap

Variance review

Yield analysis

Shift reports

Audit trail

User roles

Planner · Supervisor · Store keeper · Quality · Plant manager

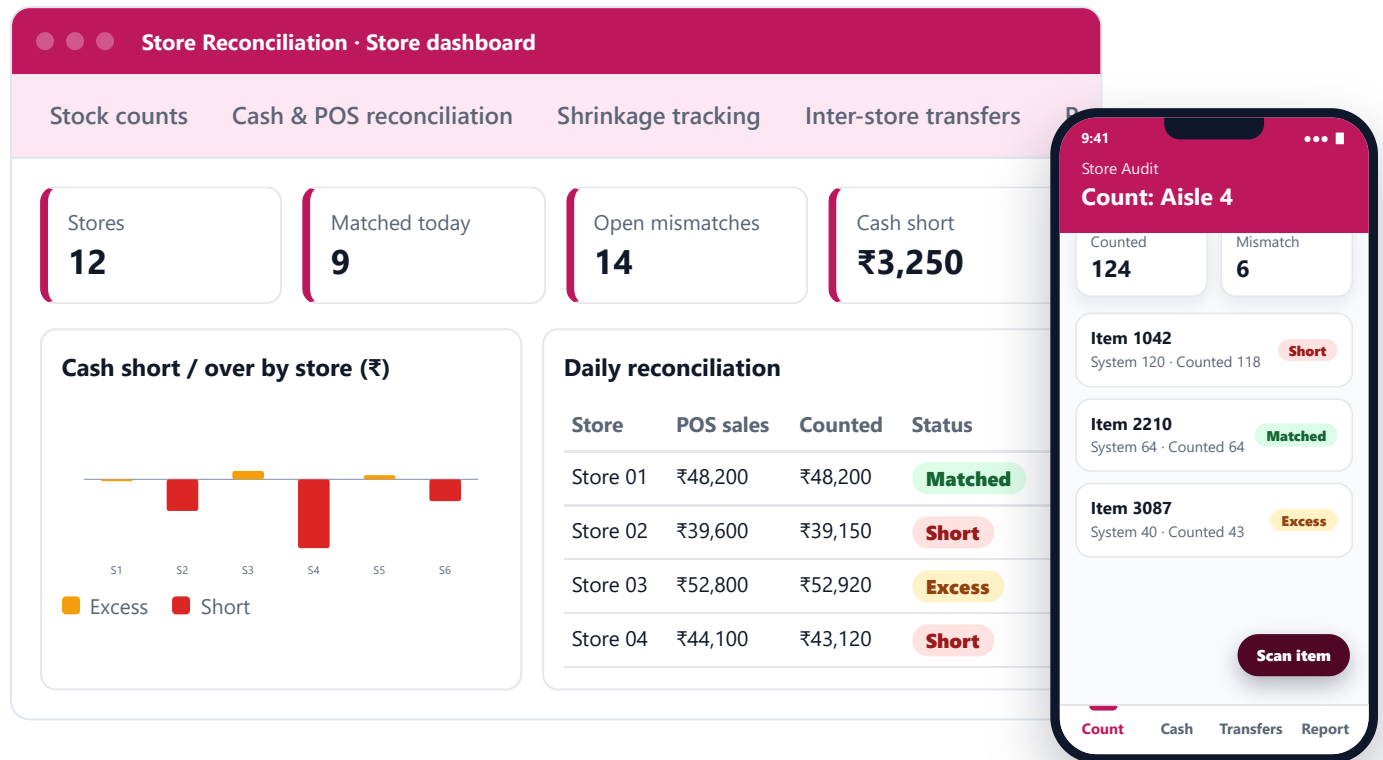

Key reports

Plan vs actual output · Yield by product · Wastage trend · Variance by shift

Best fit: Small and mid-size manufacturers, food and packaging units

Store Reconciliation

Make the shelf, the system and the till agree.

Illustrative web and mobile screens with sample data.

The problem

Physical stock, system stock and daily cash rarely match, and stores learn about shrinkage and cash gaps long after they happen.

How we solve it

A store reconciliation system that compares physical counts with system stock and till cash with POS sales every day, highlights mismatches by store and item, and tracks each one to resolution.

1. Count
2. Compare
3. Flag mismatch
4. Investigate
5. Adjust
6. Close

Core modules

- Stock counts
- Cash & POS reconciliation
- Shrinkage tracking
- Inter-store transfers
- Receiving & GRN
- Discrepancy resolution
- Store scorecards
- Audit trail

User roles

Store manager · Cashier · Auditor · Area manager · Head office

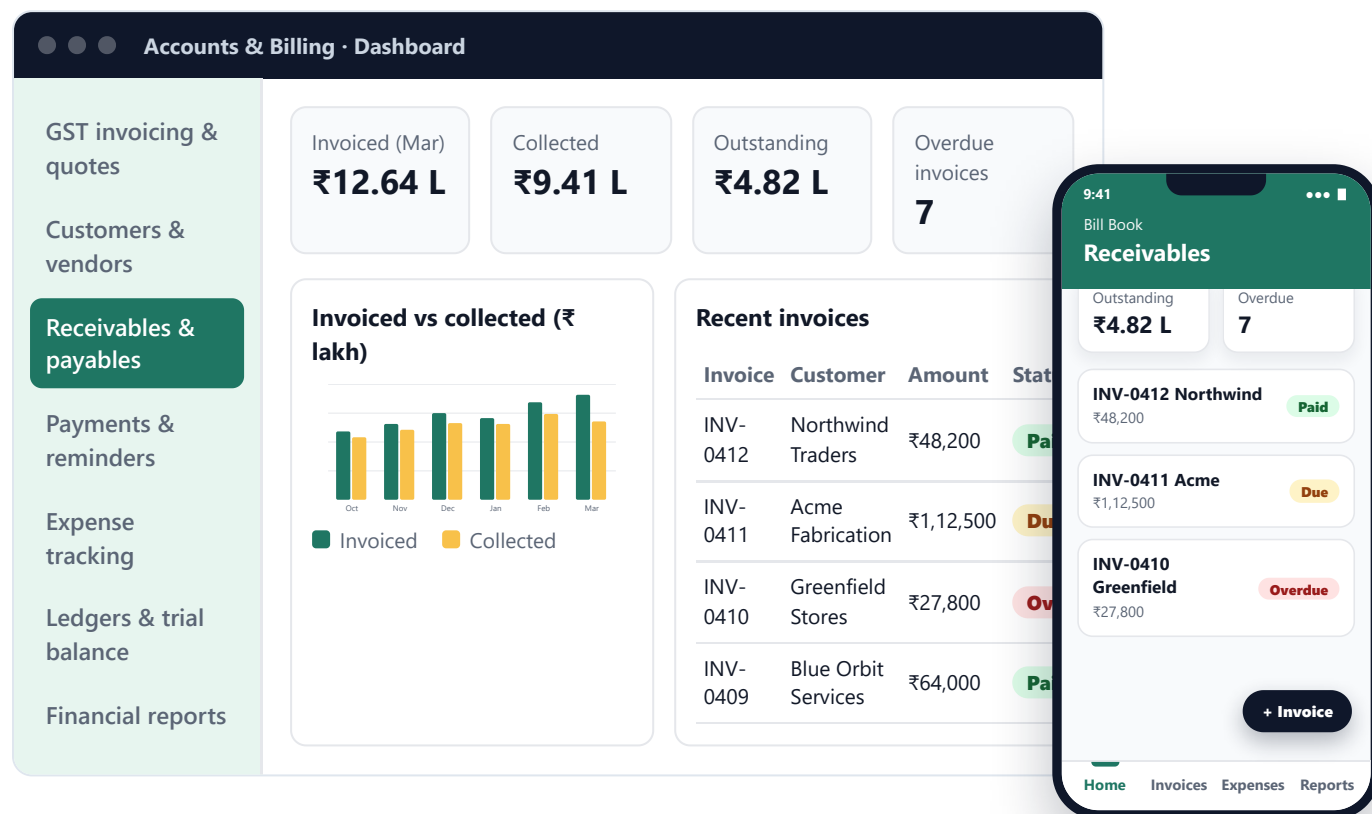

Key reports

Stock variance by store · Cash short / over · Shrinkage trend · Transfers in transit

Best fit: Retail chains, supermarkets, pharmacies and multi-outlet businesses

Accounts & Billing

GST invoicing, payments and ledgers in one place.

Illustrative web and mobile screens with sample data.

The problem

Invoices live in Excel, payments are chased over WhatsApp, and nobody has a clear view of who owes what.

How we solve it

One system for quotes, GST invoices, payment tracking and ledgers, with automatic reminders and month-end reports ready for your accountant.

1. Quote → 2. GST invoice → 3. Payment → 4. Reminder → 5. Ledger → 6. Report

Core modules

GST invoicing & quotes

Customers & vendors

Receivables & payables

Payments & reminders

Expense tracking

Ledgers & trial balance

Financial reports

User roles

Owner · Accountant · Billing staff · Auditor (view only)

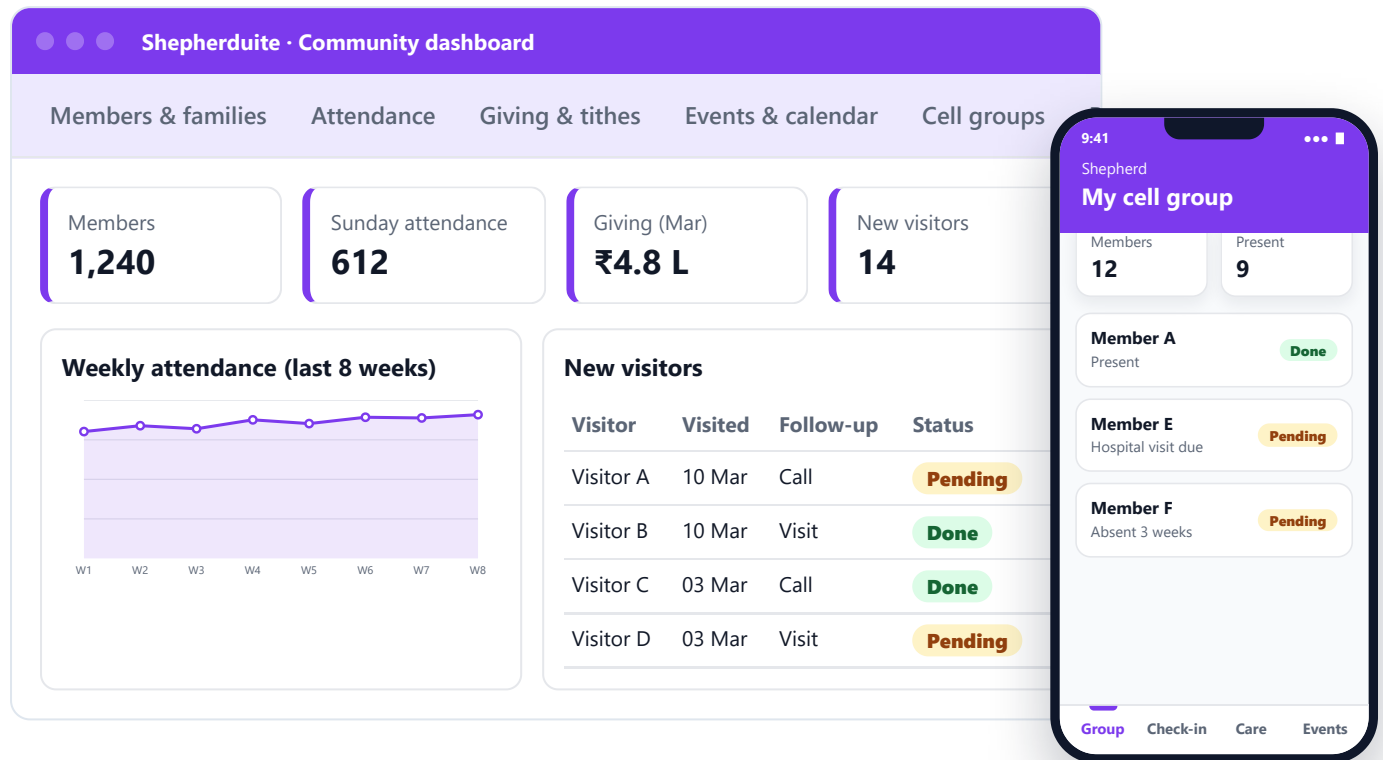

Key reports

Receivables ageing · GST summary · Profit & loss · Expense by category

Best fit: Service businesses, traders and small manufacturers

Shepherduite

Church and community management, from members to giving.

Illustrative web and mobile screens with sample data.

The problem

Member records, attendance, giving and follow-ups are kept in registers and spreadsheets, so visitors are missed and leaders lack a clear picture of the community.

How we solve it

A community management system that keeps families, attendance, giving, groups and pastoral follow-ups in one place, with simple dashboards for leaders and treasurers.

1. Welcome visitor → 2. Register → 3. Join a group → 4. Follow up → 5. Engage & serve → 6. Report

Core modules

Members & families

Attendance

Giving & tithes

Events & calendar

Cell groups

Pastoral care

Announcements

Reports

User roles

Pastor · Administrator · Group leader · Treasurer · Volunteer

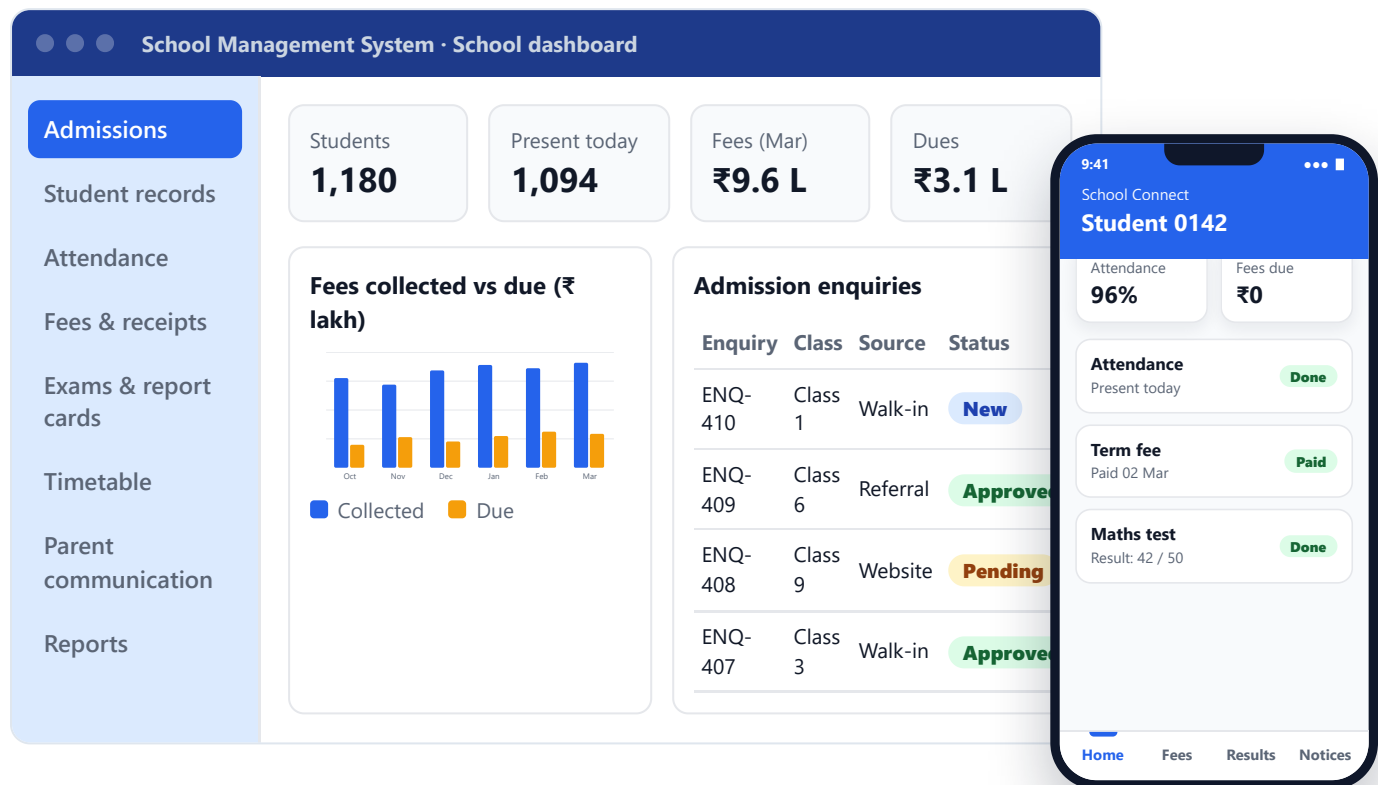

Key reports

Attendance trends · Giving summary · Member growth · Follow-up list

Best fit: Churches, ministries, trusts and community organizations

School Management System

Admissions, fees, attendance and exams in one system.

Solution blueprint: built to your requirement. Illustrative web and mobile screens with sample data.

The problem

Admissions, fee collection, attendance and marks live in separate registers, so office staff re-enter data and parents get information late.

How we solve it

A school management system that keeps student records, fees, attendance and exams together, with parent notifications and ready report cards.

1. Enquiry

2. Admission

3. Fee set-up

4. Attendance

5. Exams

6. Report card

Core modules

Admissions

Student records

Attendance

Fees & receipts

Exams & report cards

Timetable

Parent communication

Reports

User roles

Principal · Office staff · Teacher · Accountant · Parent

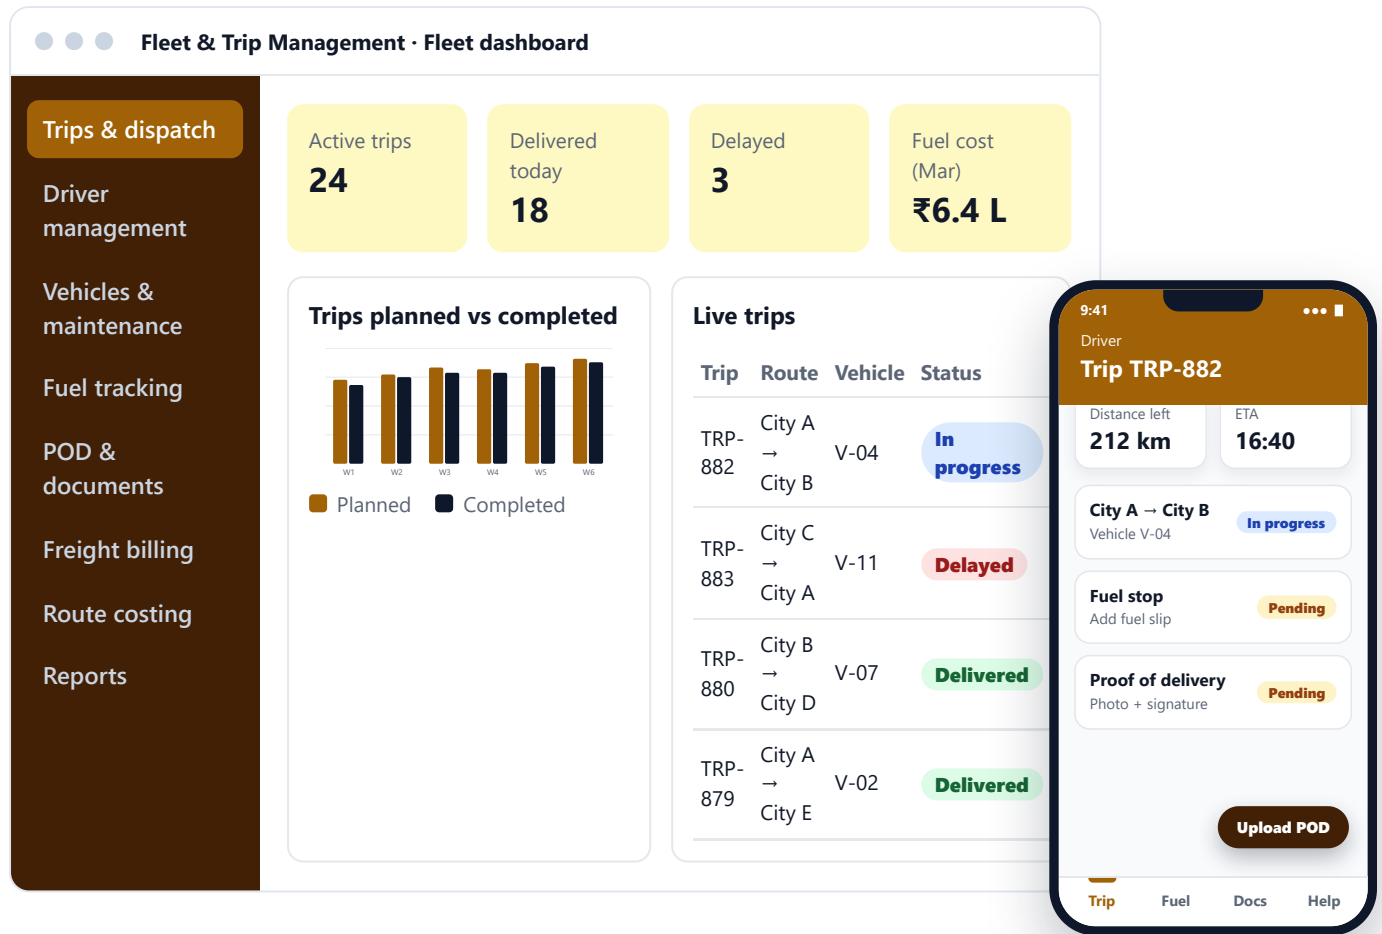

Key reports

Fee collection & dues · Attendance by class · Exam results · Admissions funnel

Best fit: Schools, colleges and coaching institutes

Fleet & Trip Management

Trips, drivers, fuel and freight billing in one system.

Solution blueprint: built to your requirement. Illustrative web and mobile screens with sample data.

The problem

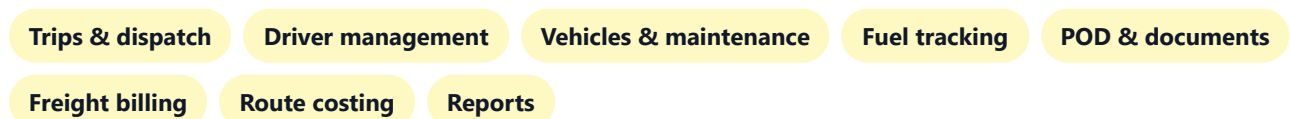

Trip sheets, fuel slips and driver payments are tracked on paper, so delays, fuel leakage and unbilled trips go unnoticed.

How we solve it

A fleet system that tracks every trip from dispatch to proof of delivery, ties in fuel and maintenance, and generates freight bills automatically.

Core modules

User roles

Dispatcher · Driver · Fleet manager · Accounts · Customer

Key reports

Trip profitability · Fuel efficiency · Maintenance due · Driver performance

Best fit: Transporters, fleet owners and distribution businesses

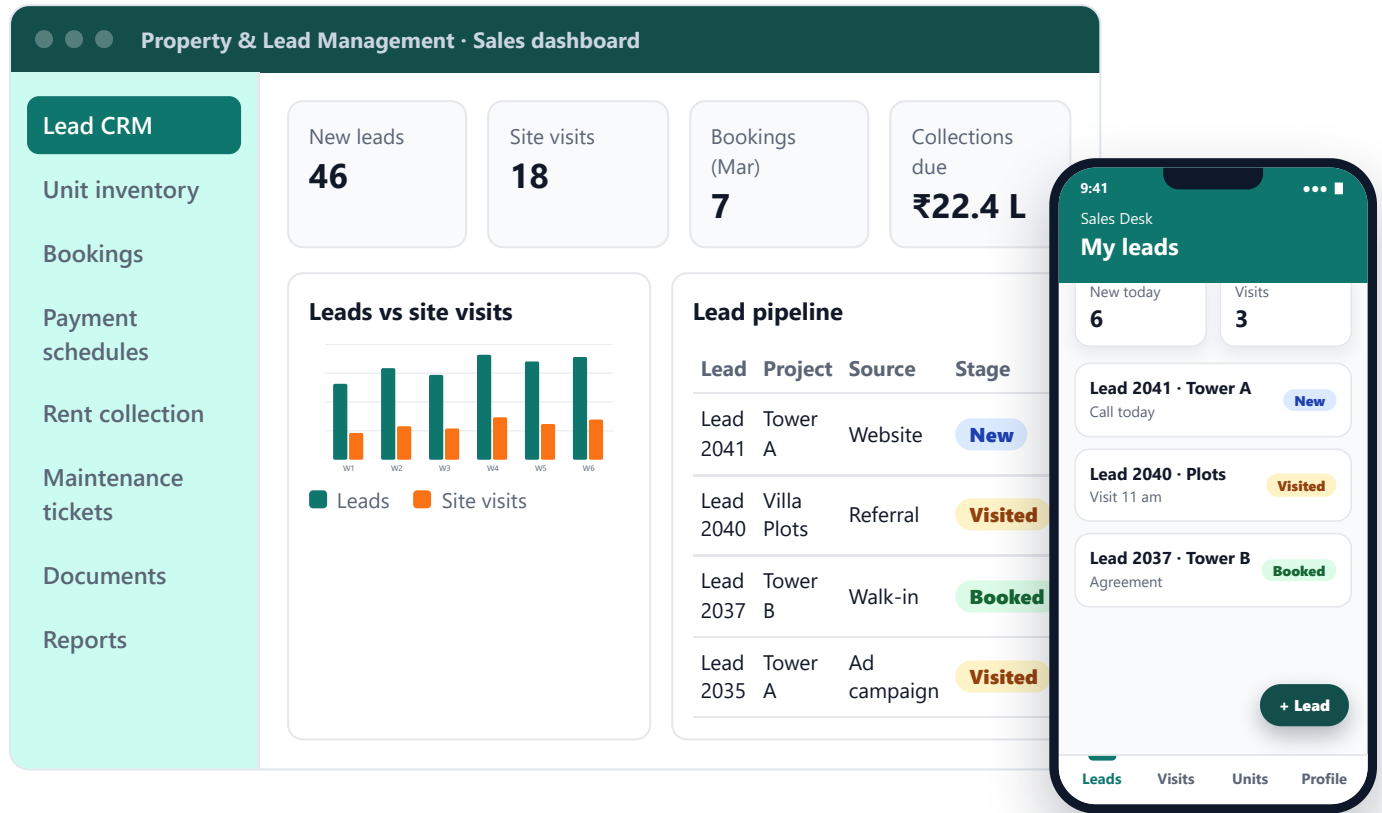

Real Estate

Buildable on request

Web + Mobile

Property & Lead Management

Leads, bookings, payment schedules and rent in one place.

Solution blueprint: built to your requirement. Illustrative web and mobile screens with sample data.

The problem

Enquiries, site visits, bookings and instalment follow-ups live in notebooks and chats, so hot leads go cold and payments slip.

How we solve it

A property CRM that follows each lead to booking, manages unit availability and payment schedules, and automates rent and instalment reminders.

1. Enquiry 2. Site visit 3. Booking 4. Payment plan 5. Agreement 6. Handover

Core modules

Lead CRM

Unit inventory

Bookings

Payment schedules

Rent collection

Maintenance tickets

Documents

Reports

User roles

Sales executive · Sales manager · Accounts · Property manager · Owner

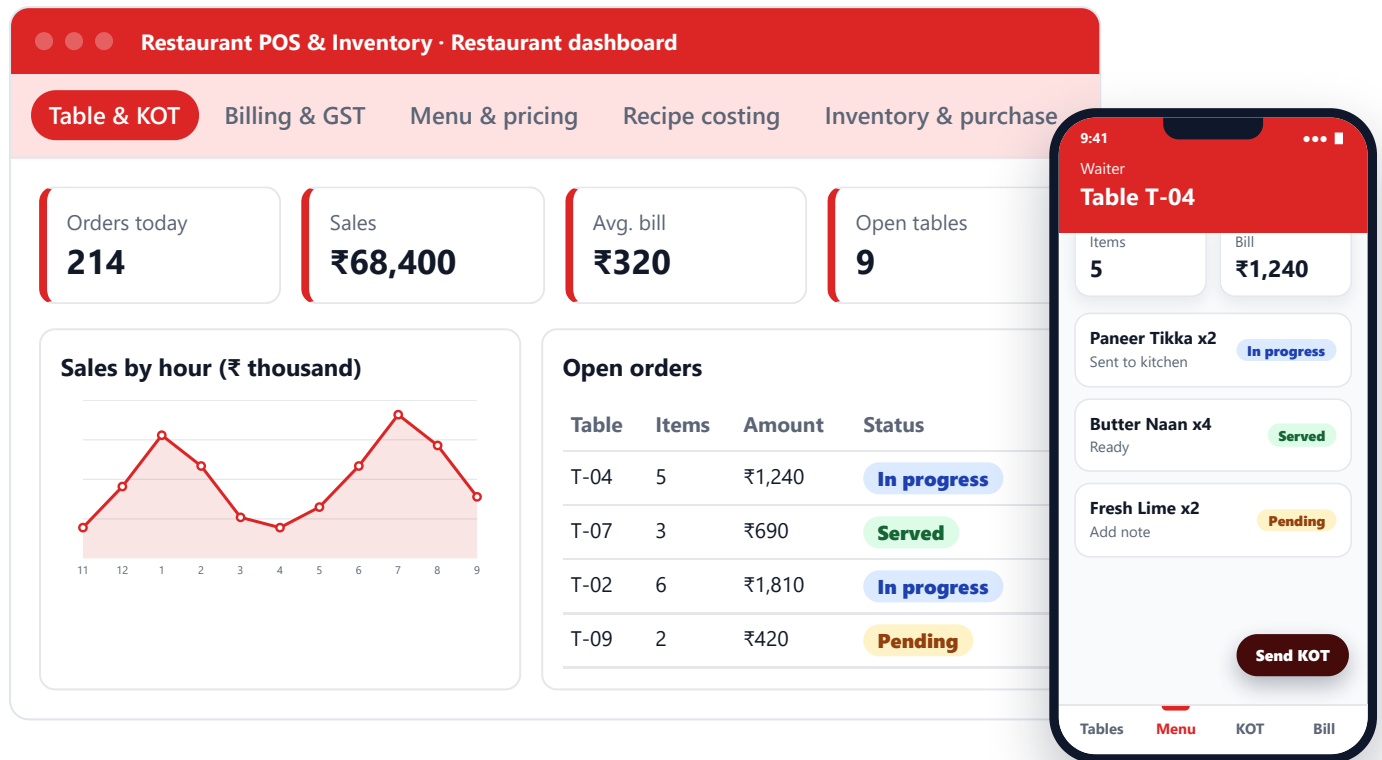

Key reports

Lead funnel · Inventory availability · Collections due · Rent ageing

Best fit: Builders, brokers, property managers and rental owners

Restaurant POS & Inventory

Billing, kitchen orders and stock for restaurants and cafes.

Solution blueprint: built to your requirement. Illustrative web and mobile screens with sample data.

The problem

Orders reach the kitchen on paper, stock is guessed, and nobody knows the true cost of each dish, so margins quietly leak.

How we solve it

A restaurant system that connects table orders, kitchen tickets, GST billing and inventory, and costs every recipe so you see the margin on each dish.

1. Order → 2. KOT to kitchen → 3. Prepare → 4. Serve → 5. Bill → 6. Stock deduction

Core modules

Table & KOT

Billing & GST

Menu & pricing

Recipe costing

Inventory & purchase

Kitchen display

Staff & shifts

Reports

User roles

Cashier · Waiter · Chef · Manager · Owner

Key reports

Item-wise sales · Recipe cost & margin · Stock usage · Daily sales summary

Best fit: Restaurants, cafes, cloud kitchens and small hotels

Analytics Dashboards

Interactive dashboards built on your data. Live versions are on our website.

Retail Sales Analytics

An interactive dashboard that tracks revenue, profit, categories and regions, built on your own data.

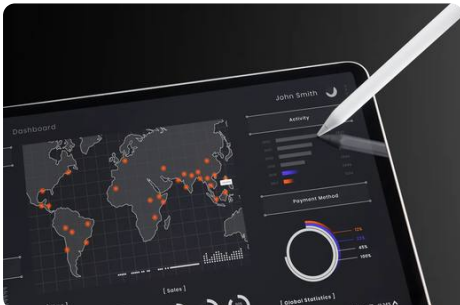

Best fit: Retail chains, distributors and multi-store businesses

Restaurant Sales Analysis

A dashboard that ranks menu items, tracks peak hours and compares outlets so you can price and staff smarter.

Best fit: Restaurants, cafes and cloud kitchens

Logistics Performance

A dashboard that follows deliveries, delays, routes and cost per trip so issues surface while they can still be fixed.

Best fit: Transporters, fleet owners and distribution teams

Do not see your industry?

Everything in this portfolio is a starting point. We build custom software, ERP modules, apps and dashboards around your exact process. Share your requirement for a free project audit and a written recommendation within 72 hours.
